

# CSS perspective-origin Property

[Reference](#)

## Example

Define at from which position the user is looking at the 3D-positioned element:

```
#div1 {  
  perspective: 100px;  
  perspective-origin: left;  
}
```

## Definition and Usage

The **perspective-origin** property defines at from which position the user is looking at the 3D-positioned element.

When defining the **perspective-origin** property for an element, it is the CHILD elements that will get the effect, NOT the element itself.

**Note:** This property must be used in conjunction with the [perspective](#) property!

To better understand the perspective-origin property, [view a demo](#).
